To Whom It May Concern:

On June 1st and 2nd, between 9am and 4pm, the Water Department will be performing valve testing and hydrant flowing in the Harmon Water Main Replacement Project Area. These valves manipulations could result in episodes of discolored water and intermittent periods of reduced pressure along with some periods of no flow.

This work on the system is necessary in order to insure more efficient and safer shut offs when the replacement project work begins. The existing valves are very old and subject to failure so please bear with us during this testing period. We will endeavor to keep shut downs to a minimum and restore normal water service as quickly as possible.

Once the Harmon Water Main Replacement Project is completed, new valves will allow the Water Department to isolate and shutdown areas affecting many fewer residents when problems do occur and episodes of discolored water will be minimized because of the new water mains.

If you have any questions please feel free to contact the Village Engineering Office at 271-4783.

Very truly yours,

Dan O'Connor, P. E.
Village Engineer

Tom Brann
Water Foreman
